

## Debugging in the browser

LND 330

how do i debug in browser?

what do i use? what is debugging?

why is it good?

debugging = the process of finding & fixing errors within a script

`Cmd + Opt + I` keys to open developer tools

`Esc` to open chrome terminal console

breakpoint = debugger will pause

- include `debugger;` syntax also pauses code

① Watch

② Call stack

③ Scope

- an error can also pause [II button is on]
- click digit to the left to pause

## Coding style

will this article talk about how to style code so that it is easily understood?

what can I do to make my code very readable?

what does readable code look like?

Curly braces - Indents -

`if (condition) {` Horizontal: 2-4 spaces / I use them, always!

statement - tab key

`}` vertical: use empty lines

Line length -

max line length should be 80-120 if longer break it

to split code blocks

max of 9 lines w/ vertical indentation

Semicolons -
