

Develop Debug Learn? - Chris Heilmann

- we should focus on our end users
- our job is to build things to allow people to do things (delivery service!)
- a lot of unnecessary code is being downloaded for no reason, and that's difficult for people w/ connectivity problems or little computer storage
- it's time to rethink tooling (developing tools for ~~new~~ developers)
- aka.ms/elements & code (test & debug in development environment)
- aka.ms/ai-autocomplete (python ~~new~~ searches through stack overflow and completes code being written)
